# UNITED STATES PATENT OFFICE.

LOUIS KYSER AND ALFRED C. REX, OF PHILADELPHIA, PENNSYLVANIA.

## DESIGN FOR A TOY MONEY-BOX.

SPECIFICATION forming part of Design No. 12,848, dated April 4, 1882.

Application filed February 13, 1882. Term of patent 3½ years.

*To all whom it may concern:*

Be it known that we, LOUIS KYSER and ALFRED C. REX, both of the city and county of Philadelphia, and State of Pennsylvania, have invented an Improvement in Designs for Toy Money-Boxes, of which the following is a specification.

Our invention relates to designs for toy money-boxes; and it consists in forming the box of two parts bolted together, one-half representing the front of a house and the other the back, the said front being provided with the representation of a door, windows, and a scroll with the word "Bank" lettered thereon, and the back being provided with windows; further, in surmounting the body of the box, which is substantially rectangular in cross-section, with a peaked roof, carrying at its ridge a cupola having the representation of a clock on front and back, the said cupola also being provided with a peaked roof; and in minor details, all of which are fully set forth in the following specification and shown in the accompanying drawings.

The object of this invention is a new and improved design for toy money-boxes.

In the drawings, Figure 1 is a front elevation of our improved design for toy money-box. Fig. 2 is a back elevation of same; and Fig. 3 is a perspective view of same, showing method of arranging the two parts.

The box is made of two halves, X and Y, and is held together by a bolt, K, the head of which forms an ornamentation. The body A in front is provided with a door, F, having a Corinthian top, supported on posts, and having the year in which they are made marked thereon. On either side of the door are Gothic windows H, having open-work in them, and above the windows are star projections or depressions I, and above the door is a scroll, J,

with the word "Bank" marked thereon. Below the door are steps G, and around the base of the body is an ornamental casting, M. The body A in back is provided with three or more windows, H; above them open-work or apertures L, as shown. The body is made to represent stone-work or masonry. Secured to the body is the peaked roof B, made to represent slate or tile, carrying on top a rectangular or other shaped cupola, D, having clock-faces C marked thereon, and said cupola is surmounted by a peaked roof, E. The two halves X and Y meet on the sides of the box, and are made so as to leave an aperture, N, in the roof when put together.

Having now described our invention, what we claim as new, and desire to secure by Letters Patent, is—

1. The design for a toy money-box, which consists of a rectangular body provided with windows and door, and carrying a peaked roof surmounted with a cupola having the representation of the face of a clock marked thereon, substantially as described.

2. The design for a toy money-box, which consists of the body A, provided in front with the representation of a door, F, windows H, and scroll J, having the word "Bank" marked thereon, and on the back with windows H, the said body carrying a peaked roof, B, surmounted with a cupola, D, having the representation of a clock, C, and a peaked roof, E, substantially as and for the purpose specified.

In testimony of which invention we hereunto set our hands.

LOUIS KYSER.  
ALFRED C. REX.
